FACULTY

David Furcy	Associate Professor, Ph.D. Georgia Institute of Technology furcyd@uwosh.edu
George Georgiev	Professor, Ph.D. Technical University, Bulgaria georgiev@uwosh.edu
Erik Krohn	Assistant Professor, Ph.D. University of Iowa krohne@uwosh.edu
Kathy Lynch	Lecturer, M.S. Texas A&M University lynchk@uwosh.edu
Thomas Naps, Chair	Professor, Ph.D. University of Notre Dame naps@uwosh.edu
George Thomas	Assistant Professor, Ph.D. University of Iowa thomasg@uwosh.edu

Reasons for considering CS at UW Oshkosh

There are many good reasons for choosing a Computer Science major. The present employment outlook is excellent:

- CareerCast, a nation-wide job service recently conducted a study and reached the conclusion that *software engineer* is the best job of 2011. According to the study, their selection of software engineer for this title "can be attributed to two emerging industries: web applications and cloud computing. A proliferation of companies making applications for smartphones and tablets, along with the push to develop cloud software hosted entirely online, has made the job market for Software Engineers broader and more diverse. And a diverse job market brings improvements in stress factors such as Growth Potential and Competitiveness, as workers become less beholden to employers or vulnerable to outsourcing."
- What's it like to be a computer scientist? The perspective of Marissa Mayer, vice president of consumer products at Google may surprise you.
- According to the "Recruiting Trends 2010—2011" report that is published by the Collegiate Employment Research Institute at Michigan State University, "Students graduating at all degree levels in computer science and related IT fields will have a favorable job market. Already in short supply, these students will see expanded opportunities due to the investments companies are making in technology". The report projects that employment opportunities for Computer Science graduates will increase by 18%
- According to the recently released 2010 Taulbee Report from the Computing Research Association:

"Computing careers are projected to be the fastest growing professional occupations over the next decade. They are among the tops in salary and ranked as some of the best jobs in America. And they're filled with tremendous intellectual challenges, excitement ,and the opportunity to change the world."
- According to a 2010 survey conducted by the National Association of Colleges and Employers Computer Science earn the fourth highest average starting salary among all majors.
- A recent article at Yahoo's "Hot Jobs" forum indicates that "as a group, 2010 graduates earning computer-related degrees saw their average salary offers soar in comparison with the other disciplines".
- A wide variety of career paths in Computer Science offer an opportunity to work with others to solve interesting problems while making a meaningful contribution to science, business, and society.
- Computer Science graduates are in high demand, and, according to a recent report posted at CNN, careers in computing are among the best-paid of the fastest-growing jobs in the economy.

According to the national Bureau of Labor Statistics, "Employment of computer scientists is expected to grow by 24 percent from 2008 to 2018, which is much faster than the average for all occupations."

And why is UW - Oshkosh the place to prepare yourself for such a career?

- The UW Oshkosh Computer Science emphasis is nationally accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 150, Baltimore, MD 21202-4012, telephone: (410) 347-7700. Only three Computer Science programs in the University of Wisconsin system presently have this distinction.
- We have an Advisory Board composed of alumni and employers. What are they saying about our program? Read excerpts from their 2005 report and their 2009 report. We'll be happy to send you more information about the Advisory Board and complete copies of all of their reports. Just contact the department chair, Tom Naps.
- UW Oshkosh Computer Science majors land internship positions at companies in the Fox Valley and beyond. Through these opportunities students gain valuable job experience, earn college credit, and build practical knowledge and teamwork skills.
- UW Oshkosh Computer Science graduates have been hired by: IBM, Oracle, Intel, Google, Kimberly Clark, American Family Insurance, Thrivent, Miles Kimball, Epic Systems, Quadgraphics, and Oracular Systems, just to name but a few.
- Our undergraduate majors have the opportunity to work with Computer Science faculty on their research projects, and also develop and conduct their own research with faculty guidance. In 2009 we were awarded a National Science Foundation Research Experience for Undergraduates grant that allows to fund up eight students each summer in collaborative research projects. Read more about this REU site award.
- Our Computer Science students gain valuable hands-on experience with Java, C++ , Microsoft Windows, Visual Studio.NET, Linux, and Oracle.
- UW Oshkosh has excellent computing facilities with over 400 PC's in student labs – including a Wintel lab and a Linux lab dedicated to Computer Science students. High-speed Internet access is available in dorm rooms, and wireless access is widely available in campus buildings.

Admission/Graduation Requirements

As of this writing the Computer Science Department has no admission requirements for the Computer Science major. Therefore any student who chooses to do so may enroll as a Computer Science major.

To be eligible for graduation, students must meet all requirements for the degree being sought in addition to earning a minimum grade point average of 2.00 in all courses required for the Computer Science major or minor.

In addition to University and College requirements, students must have a minimum grade point average of 2.00 in those computer science (Comp Sci) courses numbered 300 or above that are used to satisfy the requirements of the Computer Science major excluding Comp Sci 399, Comp Sci 446, Comp Sci 456, Comp Sci 474, and Comp Sci 490.

Please note that this statement implies that if a student completes more than the minimum number of courses required for a specific emphasis, the student may designate those courses that will be used for computing the grade point average when more than one choice is possible. The resulting set of designated courses must satisfy the requirements of a specific emphasis of the Computer Science major.

Program Objectives

Within three to five years after graduation, our typical alumni will:

1. Advance beyond initial entry-level positions as computing professionals or have made significant progress toward a graduate degree in computing.
2. Use the background they have acquired in a wide range of areas in computer science during their undergraduate study as a basis for continued growth of their professional knowledge and skills.
3. Use communication and teamwork skills to effectively collaborate with others in their workplace.
4. Demonstrate strong professional ethics in all of their computing endeavors.

Program Learning Outcomes

General outcomes that guide the specific learning outcomes for individual courses.

Students graduating with a degree in Computer Science with the Computer Science Emphasis will have:

- (a) An ability to apply knowledge of computing and mathematics appropriate to the discipline
- (b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution
- (c) An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs
- (d) An ability to function effectively on teams to accomplish a common goal
- (e) An understanding of professional, ethical, legal, security and social issues and responsibilities
- (f) An ability to communicate effectively with a range of audiences
- (g) An ability to analyze the local and global impact of computing on individuals, organizations, and society
- (h) Recognition of the need for and an ability to engage in continuing professional development
- (i) An ability to use current techniques, skills, and tools necessary for computing practice
- (j) An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices
- (k) An ability to apply design and development principles in the construction of software systems of varying complexity.

Prerequisites and Repeating Courses

Prerequisites

The Computer Science Department has established prerequisites for each course so that students will be adequately prepared for the topics covered in the course. This allows the instructor to proceed with the course in a manner that assures quality in the program.

The department strictly *enforces* the prerequisite policy. You should not take courses unless you satisfy the prerequisites. Otherwise, when the deficiency is detected, you will have to drop the course. All courses are checked.

Repeating Courses

The College of Letters and Science and the Computer Science Department permits student to repeat a given computer science course **one time only**. Note that this policy includes transfer courses. A very important consequence of this policy is that a student who does not earn a grade of C or better in certain courses that are prerequisites for a required course must withdraw from the Computer Science major. For example, suppose a student earns a D grade in CompSci 271 (Data Structures). Then s/he repeats it and earns a C- grade. Because CompSci 271 is a prerequisite for most 300-level courses, s/he will not be permitted to major in Computer Science.

Core Courses

These courses are required of all Computer Science Majors.

<u>Course</u>	<u>Credits</u>
Math 212 Mathematics for Computer Science (was numbered Math 122 prior to Fall 2009)	3 cr.
Comp Sci 221 Object Oriented Design and Programming I	3 cr.
Comp Sci 251 Computer Architecture and Assembly Language	3 cr.
Comp Sci 262 Object Oriented Design and Programming II	4 cr.
Comp Sci 271 Data Structures	4 cr.
Comp Sci 331 Programming Languages	3 cr.
Physics 311 Digital Instrumentation	4 cr.
One of the following:	
Comp Sci 399 Internship in Computer Science	3 cr.
Comp Sci 490 Practicum in Computer Science	<u>3 cr.</u>

Total: 27 cr.

Important Note:

The Physics 311 course requirement also satisfies the one-semester laboratory science course requirement for the B.S. degree, as long as the two-course laboratory science sequence is taken from courses in a department other than Physics.

Computer Science Emphasis

This emphasis focuses on the fundamental practical and theoretical foundations of computer science, providing an in-depth understanding of both the software and hardware components of computer systems. It is appropriate for students preparing for careers in scientific computing or research, and for students planning to pursue graduate degrees.

This emphasis is accredited by the Computing Accreditation Commission of ABET, 111 Market Place, Suite 150, Baltimore, MD 21202-4012, telephone: (410) 347-7700.

Requirements in addition to the Computer Science Core:

<u>Course</u>	<u>Credits</u>
Comp Sci 310 Computer Organization and Design	3 cr.
Comp Sci 321 Algorithms	3 cr.
Comp Sci 350 Ethical Issues in Computing	1 cr.
Comp Sci 381 Theory of Computing	3 cr.
Comp Sci 421 Operating Systems	4 cr.
Comp Sci 431 Compilers	4 cr.
Comp Sci 499 Computer Science Assessment	0 cr.
Math 171 Calculus I	4 cr.
Math 172 Calculus II	4 cr.
Math 301 Introduction to Probability and Statistics	3 cr.
Electives: 6 credits from elective list A. The chosen electives must not appear above as requirements for the Computer Science emphasis.	<u>6 cr.</u>
Total:	35 cr.

Important Notes:

1. The Computer Science Emphasis is open only to students pursuing the B.S. degree.
2. The math and science requirements of the CS emphasis necessitate completion of Mathematics 171, 172, 212, 301; Computer Science 381; Physics 311; plus an additional 11 units (crs.) from other math and science courses. In selecting courses for these additional 11 units (crs.), science courses must be chosen to insure the student meets the general university natural science requirement for a B.S. degree, and math courses must be chosen from elective List C.

Software Engineering Emphasis

This emphasis focuses on knowledge and skills for the design, development, maintenance, and management of software, including software for the operation of instrumentation. It is appropriate for students preparing for careers as systems programmers, systems analysts, software engineers, or computer-based instrumentation specialists.

Requirements in addition to the Computer Science Core:

<u>Course</u>	<u>Credits</u>
Comp Sci 321 Algorithms	3 cr.
Comp Sci 341 Software Engineering I	3 cr.
CompSci 342 Software Engineering II	3 cr.
CompSci 350 Ethical Issues in Computing	1 cr.
Comp Sci 361 Database Systems	3 cr.
Either Comp Sci 421 Operating Systems or Comp Sci 431 Compilers	4 cr.
Either Math 171 Calculus I or Math 206 Mathematics for Business Analysis II	4 cr.
Either Math 201 Applied Statistics, Math 301 Introduction to Probability and Statistics, or Econ 210 Economic and Business Statistics	3 cr.
Electives: 3 credits from elective list A, and 6 credits from list B and list C combined. The chosen electives must not appear above as requirements for the Software Engineering emphasis.	<u>9 cr.</u>
Total:	33 cr.

Important Notes:

1. The College of Business (COBA) has a grade point restriction for enrolling in upper level business courses. Therefore if your overall GPA falls below that restriction level, you must either postpone taking MIS courses until your GPA improves, or you must change your emphasis.
2. For prerequisite purposes only, COBA permits the following substitutions of CompSci courses for COBA courses:

MIS pre-requisite course	Comp Sci substitute
Bus 314: Sys Analys & Design	Comp Sci 341: Software Engineering
Bus 315: DataBase Sys in Business	Comp Sci 361: Database
Bus 355: Networking & Data Com	Comp Sci 391: Data Com & Computer Networks

Computer Information Systems Emphasis

This emphasis focuses on knowledge and skills for designing, implementing, and administering application software, including network administration and database administration, computerization plan preparation, and user requirement specification preparation. It is appropriate for students preparing for careers as systems administrators, network managers, or application programmers.

Requirements in addition to the Computer Science Core:

<u>Course</u>	<u>Credits</u>
Comp Sci 341 Software Engineering I	3 cr.
Comp Sci 346 Web Software Development	3 cr.
Comp Sci 350 Ethical Issues in Computing	1 cr.
Comp Sci 361 Database Systems	3 cr.
Either Math 206 Mathematics for Business Analysis or Math 171 Calculus I	4 cr.
Either Math 201 Applied Statistics, Math 301 Introduction to Probability and Statistics, or Econ 210 Economic and Business Statistics	3 cr.
Electives: 9 credits from elective list A, and 6 credits from list B. The chosen electives must not appear above as requirements for the Computer Information Systems emphasis.	<u>15 cr.</u>
Total: 32 cr.	

Important Notes:

1. The College of Business (COBA) has a grade point restriction for enrolling in upper level business courses. Therefore if your overall GPA falls below that restriction level, you must either postpone taking MIS courses until your GPA improves, or you must change your emphasis.
2. For prerequisite purposes only, COBA permits the following substitutions of CompSci courses for COBA courses:

MIS pre-requisite course	Comp Sci substitute
Bus 314: Sys Analys & Design	Comp Sci 341: Software Engineering
Bus 315: DataBase Sys in Business	Comp Sci 361: Database
Bus 355: Networking & Data Com	Comp Sci 391: Data Com & Computer Networks

Elective Lists

List A: Computer Science Courses

1. Comp Sci 300 Artificial Intelligence
2. Comp Sci 310 Computer Organization and Design
3. Comp Sci 321 Algorithms
4. Comp Sci 341 Software Engineering I
5. Comp Sci 342 Software Engineering II
6. Comp Sci 346 Web Software Development
7. Comp Sci 350 Ethical Issues in Computing
8. Comp Sci 361 Database Systems
9. Comp Sci 371 Computer Graphics
10. Comp Sci 381 Theory of Computing
11. Comp Sci 391 Data Communications and Computer Networks
12. Comp Sci 421 Operating Systems
13. Comp Sci 431 Compilers
14. Comp Sci 480 Topics in CS

List B: MIS Courses

1. Business 314 Information Systems Analysis and Design
2. Business 315 Database Systems in Business
3. Business 319 MIS Topics
4. Business 355 Network and Telecomm Systems
5. Business 410 Application Software Design
6. Another MIS course approved in advance by the Computer Science department

List C: Physics and Mathematics courses

Physics:

1. Physics 305 Electronic Circuits & Devices
2. Physics 319 Digital Signal Processing
3. Physics 405 Modern Instrumentation & Interfacing
4. Physics 415 Microprocessor Applications
5. A Physics course approved in advance by the Computer Science department

Mathematics:

1. Math 222 Introduction to Abstract Mathematics
2. Math 256 Algorithmic Matrix Algebra with Models
3. Math 302 Intermediate Statistical Methods
4. Math 304 Introduction to Nonparametric Methods
5. Math 342 Abstract Algebra I
6. Math 346 Linear Algebra
7. Math 349 Number Theory
8. Math 355 Introduction to Numerical Analysis
9. Math 356 Linear Numerical Analysis
10. Math 357 Linear Programming
11. Math 371 Differential Equations
12. Math 385 Applied Regression
13. Math 401 Mathematical Statistics I
14. Math 402 Mathematical Statistics II
15. A Mathematics course approved in advance by the Computer Science department

Course Rotation

Rotation schedule for upper-level courses

The Computer Science Department will attempt to offer upper-level courses according to the following rotation. The schedule could be altered due to lack of resources or low enrollments.

The following courses will be offered once per year:

Fall Semester

Comp Sci 321 Algorithms
Comp Sci 341 Software Engineering I
Comp Sci 346 Web Software Development
Comp Sci 431 Compilers

Spring Semester

Comp Sci 331 Programming Languages
Comp Sci 342 Software Engineering II
Comp Sci 350 Ethical Issues in Computing
Comp Sci 361 Database Systems
Comp Sci 421 Operating Systems

The following courses will be offered every third semester:

Fall 2012

Comp Sci 300 Artificial Intelligence
Comp Sci 381 Theory of Computing

Spring 2013

Comp Sci 310 Computer Organization and Design
Comp Sci 371 Computer Graphic
Comp Sci 334-35 Visual/GUI Programming

Fall 2013

Comp Sci 391 Data Communication and Computer Networks
Comp Sci 480 Computer Science Topics

Spring 2014

Comp Sci 300 Artificial Intelligence
Comp Sci 381 Theory of Computing

Course Descriptions

Note: Changes have been made to the course descriptions for CS 221, 251, 262, 271, 321, and 310. These changes will go into effect in the Fall 2012 semester. Additionally the new CS 314 course, which will formalize the practice and participation of our teams in the ACM-sponsored International Collegiate Programming Contest, will be offered in Fall 2012 to coordinate with the contest event in November.

100 Level: 115, 125, 142

200 Level: 221, 251, 262, 271

300 Level: 300, 310, 314, 321, 331, 334, 335, 341, 342, 346, 347, 350, 361, 371, 381, 391, 399

400 Level: 421, 431, 480, 490

COMP SCI 115 Using Computers (3 units)

This course introduces students to computers and their use. The course emphasizes productivity tools such as word processing, spread sheet and internet application packages. Emphasis will be placed on methodologies that acquire, organize, analyze, synthesize, and present data.

This course does not apply toward the Comp Sci major or minor. Students may not earn credit for both CompSci-115 and Business Administration-210. Not open to students who have completed CompSci-271.

Prerequisite: None. (Fall, Spring)

COMP SCI 125 Web Site Development (3 units)

An introduction to the tools for developing World Wide Web pages. Topics covered include: Internet history, overview of file transfer, remote login, electronic mail, introduction to Hyper Text Markup Language (HTML), incorporating graphics, clip art and other multimedia materials, techniques and principles of effective presentation and uploading files to a server.

This course does not apply toward the Comp Sci major or minor. Not open to students who have completed CompSci-271.

Prerequisite: None. (Fall or Fall Interim, Spring)

COMP SCI 142 Elementary Programming Visual Basic (3 units)

A service course in computer programming using the language Visual Basic. Topics covered include problem solving, algorithms, selection statements, repetition, arrays, functions and sub-programs.

This course does not apply toward the Comp Sci major or minor. Not open to students who have completed CompSci-271.

Prerequisite: Math-103 with a grade of C or better, or qualifying for either Math-104 or Math-171 via Math Placement Test. Not open to students who have completed CompSci- 271. (Fall, Spring)

COMP SCI 221 Object-Oriented Design and Programming I (3 units)

A first course in problem solving, software design, and computer programming using an object-oriented language. Problem solving/software design techniques include: flow charts, pseudo code, structure charts, and UML class diagrams. Data structures and algorithms include: arrays, characters strings, Linear search. Programming topics include; data types assignment statements, standard input/output, selection, repetition, functions/methods, parameters, scope of identifiers, debugging.

Prerequisite: A grade of C or better in Math 104 or Math 108 or Math 206 or Computer Science 142, or qualifying for Math 171 via the Mathematics Placement Exam. (Fall, Spring)

COMP SCI 251 - Computer Architecture and Assembly Language (3 units)

An introduction to RISC-based instruction set architecture. Topics include: data representation, assembly language programming, run-time storage management, pointers and references as exemplified in the C++ programming language, and introduction to system software.

Prerequisite: Computer Science 221 with a grade of C or better. (Fall, Spring)

COMP SCI 262 Object-Oriented Design and Programming II (4 units)

A second course in problem solving, software design, and computer programming using an object-oriented language. Problem solving/software design topics include: abstract data types, universal modeling language (UML), simple recursion, unit testing, event-handling, simple concurrency. Data structures and algorithms include: binary search, simple sorting algorithms, use of collection classes and their iteration protocols, sequential file processing. Additional topics include: inheritance, polymorphism, graphical user interfaces, simple use of threads.

Prerequisite: Mathematics 108 or equivalent with a grade of C or better, or qualifying for a higher level mathematics course via the Mathematics Placement exam, and Computer Science 221 or equivalent with a grade of C or better. (Fall, Spring)

COMP SCI 271 Data Structures (4 units)

A course surveying the fundamental methods of representing data and the algorithms that implement and use those data representation techniques. Data structures and algorithms include; linked lists, stacks, queues, trees, heaps, priority queues, hashing, searching, sorting, data compression, graphs, recursion. Analysis topics include: elementary big-O analysis, empirical measurements of performance, time/space trade-offs, and identifying differences among best, average, and worst case behaviors.

Prerequisite: Computer Science 262 with a grade of C or better and either completion of Computer Science 251 with a grade of C or better or concurrent registration in Computer Science 251. (Fall, Spring)

COMP SCI 300 Artificial Intelligence (3 units)

This course is a survey of existing techniques in the field of artificial intelligence. An introduction to the areas of robotics, theorem proving, heuristic programming, natural language processing, neural networks, and game playing is presented. Students are expected to demonstrate mastery via computer programs using the techniques of artificial intelligence.

Prerequisite: CompSci-262 with a grade of C or better. (Every 3rd semester)

COMP SCI 310 Computer Organization and Design (3 units)

An introduction to digital logic and computer hardware organization. The students are introduced to elementary Boolean algebra and switching theory as related to computer architecture. Emphasis is given to the design of Central Processing Units, Arithmetic and Logic Units, and main memories. A comparison of alternate computer organizations is presented.

Prerequisite: CompSci-251, and Math-212, with grade of C or better. Prerequisite or concurrent enrollment: Physics-311. (Every 3rd semester)

COMP SCI 314 Practice for ICPC competition (1 units, repeatable)

This course is taken by students participating in the November ACM International Collegiate Programming Contest. During the course and prior to their participation in the contest, students practice team-oriented problem-solving strategies in areas that often arise in the problems that are given during the contest. These areas include data structures, string manipulation, combinatorics, graph algorithms, dynamic programming, and computational geometry.

Prerequisite: Departmental consent, offered each fall in conjunction with the November competition

COMP SCI 321 Algorithms (3 units)

Algorithm design techniques including brute-force, backtracking, divide-and-conquer, dynamic programming and greedy algorithms. Other topics include big-O and amortized analysis, recurrence relations in the analysis of recursive algorithms, numerical algorithms, pattern matching, data integrity, authentication, and encryption.

Prerequisite: Computer Science 271 and Math 212 with a grade of C or better. (Fall)

COMP SCI 331 Programming Languages (3 units)

A study of programming languages. Topics covered include: formal syntactic description, methods of implementation, and language features such as recursion, block structure, string processing, and list processing. Specific high level programming languages are studied to demonstrate the use of these language features.

Prerequisite: CompSci-271 with a grade of C or better. (Spring)

COMP SCI 334 Adv Visual Basic Programming (1 unit)

The objectives of this course are to provide fast-paced coverage of writing Windows applications in Visual Basic to students who already have substantial programming experience in another language. The course will describe Visual Basic in the context of Microsoft's .NET framework and focus on a number of advanced concepts. These concepts will include, but are not limited to, the event-handling model, object-oriented programming, a wide range of GUI controls, file-handling, database access, ASP, .NET, Web forms, and Web controls.

This course does not count toward the CompSci major or minor. It does count for credit toward the degree.

Prerequisite: CompSci-262 with a grade of C or better. (Every 3rd semester)

COMP SCI 335 Windows & GUI Programming (2 units)

This course examines modern Windows and GUI programming and design techniques, using the Microsoft.Net framework as a basis. The course will include an overview and history of GUI programming. The C# language will be studied, along with an introduction to back-end database (ADO.Net) connectivity within .Net, and its role in the tiered structure of modern application design. Web-based forms and Active Server Pages (ASP.Net) will be covered, along with the recent concept of XML Web Services. Finally, the course will look at aspects of components, deployment and class design within the .Net environment, concluding with other advanced .Net techniques such as Reflection.

This course does not count toward the CompSci major or minor. It does count for credit toward the degree.

Prerequisite: Concurrent registration in CompSci-334 or prior completion of CompSci-334 with a grade of C or better. (Every 3rd semester)

COMP SCI 341 Software Engineering I (3 units)

This course will provide an in-depth study and analysis of at least one large scale software system. Students will analyze, design, and partially implement an extensive software project. Case studies will address major system concerns such as specification, classification, inter-relationships, validation, and evaluation. Other topics include the use of UML, prototyping, data flow diagrams and CASE tools.

Prerequisite: CompSci-271 with a grade of C or better OR Junior-level standing and CompSci-262 with a grade of C or better. (Fall)

COMP SCI 342 Software Engineering II (3 units)

Software Engineering is the second of a two-semester sequence on the topic of modern Software Engineering tools and techniques. Topics covered include Design Patterns, the Unified Modeling Language (UML), Component-based Software Development, Advanced OO Design and Analysis, Refactoring, and other techniques such as Extreme Programming. An extensive software development project will allow for practical application of the discussed techniques.

Prerequisite: CompSci-271 and CompSci-341, each with a grade of C or better. (Spring)

COMP SCI 346 Web Software Dev (3 units)

An introduction to the tools for developing internet applications. Topics covered include: Internet history, the HyperText Markup Language, graphic images and manipulation, multimedia, programming in the JavaScript and PERL languages.

Prerequisite: CompSci-262 with a grade of C or better. (Fall)

Computer Science 347 Introduction to Usability (3 units)

This course presents the basic theory and professional views on design and usability, with an emphasis on human-computer interaction in web-based environments. The nature of life in general requires understanding of how people think and act. What makes a well-designed door versus a poorly designed door? Understanding the answer scientifically is based on understanding people and usability, not the mechanics of doors. This class will focus on several basic principles that range from defining usability, design, sketches and how to evaluate usability. A case study will be conducted using high-level psychology and visual perception concepts that often pertain to usability.

Prerequisites: Computer Science 142 or Computer Science 221, and Math 201 or Math 301 or Econ 210 or Psychology 203, and junior standing.

COMP SCI 350 Ethical Issues in Computing (1 units)

A study of the evolution of computing, its implications for society, and the ethical issues underlying those implications. This course will focus on reading the current literature regarding these issues and on presenting the pros and cons of such issues in both oral and written fashion. The course is required for all Computer Science majors.

Prerequisites: Junior standing and completion of Computer Science 262 with a grade of C or better and Department Consent. (Spring)

COMP SCI 361 Database Systems (3 units)

An introduction to database processing with emphasis on database techniques, design, and modeling. Programming projects include implementation of selected database processing methods and the use of database software.

Prerequisite: CompSci-271 with a grade of C or better. (Spring)

COMP SCI 371/571 Computer Graphics (3 units)

An introduction to the mathematics, data structures, and algorithms used to create both 2D and 3D graphical output. 2D topics include viewing transformation, clipping, scan conversion, geometric transformations, hierarchical modeling and animation. 3D topics include projections, viewing systems, back face culling, polygon clipping, wireframe images, visible surface algorithms, Phong reflection model, Gouraud and Phong shading techniques, color dithering, color quantization, ray tracing and Bezier patches.

Prerequisite: CompSci-262 and Math-171 or Math 206 each with a grade of C or better. (Every 3rd semester)

COMP SCI 381 Theory of Computing (3 units)

An introduction to the basic concepts in the theory of computing. Topics covered will include automata theory, formal languages, Turing machines, the Chomsky Hierarchy, and undecidability.

Prerequisite: CompSci-271, and Math-212 or Math-222 all with a grade of C or better. (Every 3rd semester)

COMP SCI 391/591 Data Communication and Computer Networks (3 units)

An introductory course which covers the basic concepts in data communication and computer networks. Topics covered will include the nature of data communication, characteristics of computer networks, the ISO-OSI network protocol layers, error detection and correction codes, and network performance considerations.

Prerequisite: CompSci-251, CompSci-271 and Math-212 each with a grade of C or better. (Every 3rd semester)

COMP SCI 421 Operating Systems (4 units)

An introduction to operating systems concepts. Topics covered include: interrupts, memory allocation, virtual memory techniques, process scheduling and synchronization, deadlocks, resource allocation, and file systems. A major programming project will be assigned to provide experience with operating system design.

Prerequisite: CompSci-271 and Math-212, both with a grade of C or better. (Spring)

NOTE: The Computer Science Department will accept courses similar to CompSci-421 from all other schools as counting toward the list of “elective courses,” but not the list of “required courses.”

COMP SCI 431 Compilers (4 units)

An introduction to compiler writing techniques for translating a higher level programming source language into a lower level target language. Topics to be covered include: definition of programming languages, lexical and syntactic analysis, low level code generation and optimization, run time systems, and error detection, reporting, and recovery. A major programming project will be assigned to provide experience with compiler design.

Prerequisite: CompSci-331 and Math-212 each with a grade of C or better. (Fall)

NOTE: The Computer Science Department will accept courses similar to CompSci-431 from all other schools as counting toward the list of “elective courses,” but not the list of “required courses.”

COMP SCI 480 Topics in Comp Sci (3 units)

A topic of current interest in computer science will be investigated by faculty and qualified students. In addition to lectures by faculty, the students will be responsible for research and presentation of selected aspects of the topic. The course may be repeated for credit if the topic is different, and the student has the consent of department. Graduate students will be required to do an extra programming project or paper.

Prerequisite: Junior-level standing and consent of the instructor. (Every 3rd Semester)

Practicum and Internship

The courses CompSci-399 Internship in Computer Science and CompSci-490 Practicum in Computer Science are designed to be the capstone courses for the major or minor. Either course satisfies the Writing Emphasis requirement in the Computer Science Department. Each semester a faculty member in the Computer Science department is assigned the duties of being the "Practicum & Internship Coordinator." The name of and the times to see the coordinator are posted in the departmental office each semester.

COMP SCI 399 Internship in Computer Science Credits (3 units)

An internship experience with a cooperating organization or corporation to provide on-the-job learning. This course satisfies the Writing Emphasis requirement for the Computer Science major.

The internship guidelines and application form are online.

Prerequisites: 75 credits toward graduation, six credits of 300-400 level Computer Science courses. Concurrent registration in Intradsc 208 (Professional Career Skills in Math and Natural Science, 1 credit) or completion of Intradsc 208 with a passing grade.

COMP SCI 490 Practicum in Computer Science (3 units)

A project-oriented course that brings together the material learned in previous computer science courses. The student will investigate and solve a problem(s) under supervision. This course satisfies The Writing Emphasis requirement for the Computer Science major.

The practicum guidelines and application form are online.

Prerequisite: 75 credits toward graduation and six credits of 300-400 level Computer Science courses. Concurrent registration in Intradsc 208 (Professional Career Skills in Math and Natural Science, 1 credit) or completion of Intradsc 208 with a passing grade.

The Computer Science Minor

The Common Core

These courses are **required** of all Computer Science **Minors**.

<u>Course</u>	<u>Credits</u>
Comp Sci 221 Object-Oriented Programming I	3 cr.
Comp Sci 251 Computer Architecture and Assembly Language	3 cr.
Comp Sci 262 Object-Oriented Programming II	4 cr.
Comp Sci 271 Data Structures	<u>4 cr.</u>
Total	14 cr.

Elective Computer Science Courses

(9-11 credits)

Any **three** courses may be selected from the following upper-division offerings.

<u>Course</u>	<u>Credits</u>
Comp Sci 300 Artificial Intelligence	3 cr.
Comp Sci 310 Computer Organization and Design	3 cr.
Comp Sci 321 Algorithms	3 cr.
Comp Sci 331 Programming Languages	3 cr.
Comp Sci 335 Windows and GUI Programming	2 cr.
Comp Sci 341 Software Engineering I	3 cr.
Comp Sci 342 Software Engineering II	3 cr.
Comp Sci 346 Web Software Development	3 cr.
Comp Sci 361 Database Systems	3 cr.
Comp Sci 371 Computer Graphics	3 cr.
Comp Sci 381 Introduction to the Theory of Computing	3 cr.
Comp Sci 391 Data Communication and Computer Networks	3 cr.
Comp Sci 421 Operating Systems	4 cr.
Comp Sci 431 Compilers	4 cr.
Comp Sci 480 Advanced Topics in Computer Science	3 cr.
Comp Sci 490 Practicum in Computer Science	<u>3 cr.</u>
Total:	23-25 cr.

Suggested Course Sequences

Prerequisite course requirements are strictly adhered to. Even so, many good arrangements of computer science courses exist. The following is a sampling you may wish to consider. The variations are driven by the meeting of prerequisites for CompSci 221.

CS = Computer Science Course
M = Math Course

P = Physics Course
Elec = Computer Science Elective

Plan 1 {CS Emphasis}								
Semester	1	2	3	4	5	6	7	8
	CS-221	CS-262	CS-251	CS-331	M-301	CS-421	CS-431	CS-490/399
	M-171	M-172	CS-271	P-311	CS-310	CS-350	Elec	CS-381
			M-212		CS-321	Elec		
Plan 2 {SE Emphasis}								
Semester	1	2	3	4	5	6	7	8
	CS-221	CS-262	CS-271	CS-251	CS-341	CS-331	CS-431	CS-421
	Calculus	Statistics	M-212	P-311	CS-321	CS-361	Elec	CS-490/399
					Elec	CS-342		Elec
Plan 3 {SE Emphasis}								
Semester	1	2	3	4	5	6	7	8
	CS-221	CS-262	CS-271	P-311	CS-341	CS-331	CS-490/399	CS-421
	M-106	Calculus	CS-251	Statistics	CS-321	CS-361	Elec	Elec
			M-212		Elec	CS-342		Elec
Plan 4 {SE Emphasis}								
Semester	1	2	3	4	5	6	7	8
	M-108	CS-221	CS-262	CS-271	CS-321	CS-331	CS-431	CS-490/399
		Calculus	M-212	CS-251	CS-310	CS-361	CS-341	CS-342
				P-311	Statistics	Elec	Elec	Elec
Plan 5 {CIS Emphasis}								
Semester	1	2	3	4	5	6	7	8
	M-104	CS-221	CS-262	CS-271	CS-341	CS-331	Elec	Elec
	M-106 (interim)	Calculus	M-212	CS-251	Elec	CS-361	Elec	CS-346
				Statistics		P-311	CS-490/399	Elec
Your Plan:								
Semester	1	2	3	4	5	6	7	8

Progress Checklist

Print and use this sheet to record your progress toward the major

CS Emphasis

Computer Science Required:

1. CS-221 _____
2. CS-251 _____
3. CS-262 _____
4. CS-271 _____
5. CS-310 _____
6. CS-321 _____
7. CS-331 _____
8. CS-350 _____
9. CS-381 _____
10. CS-421 _____
11. CS-431 _____
12. One of:
 1. CS-399 _____
 2. CS-490 _____

Computer Science Electives:

1. _____
2. _____

Mathematics Required:

1. Math-171 _____
2. Math-172 _____
3. Math-212 _____
4. Math-301 _____

Physics Required:

1. Physics-311 _____

SE Emphasis

Computer Science Required:

1. CS-221 _____
2. CS-251 _____
3. CS-262 _____
4. CS-271 _____
5. CS-321 _____
6. CS-331 _____
7. CS-341 _____
8. CS-342 _____
9. CS-350 _____
10. CS-361 _____
11. One of:
 1. CS-421 _____
 2. CS-431 _____
12. One of:
 1. CS-399 _____
 2. CS-490 _____

Computer Science Electives:

1. _____
 2. _____
- C

Mathematics Required:

1. Calculus _____
2. Math-212 _____
3. Statistics _____

Physics Required:

1. Physics-311 _____

CIS Emphasis

Computer Science Required:

1. CS-221 _____
2. CS-251 _____
3. CS-262 _____
4. CS-271 _____
5. CS-331 _____
6. CS-341 _____
7. CS-346 _____
8. CS-350 _____
9. CS-361 _____
10. One of:
 1. CS-399 _____
