

2023-2024 Grounds Department Ice Salt Reduction Plan

The Custodial & Grounds Departments will be using a new product when salting entrances of buildings on the campus this winter season. Green Earth Ice Melter is a more environmentally friendly ice melt product that will have many benefits for the university. The Green Earth Ice Melter can work at half the rate of traditional salt, so one bag is as effective as two bags. By using less salt, we minimize damage to the university grounds, and we send less salt into the Fox River. This product is effective to -25 below zero, providing better prevention of ice development than salt. The Custodial & Grounds Department will continue to work towards improvements in safety and sustainability.

How much is enough??

10 lbs per 1000 sq. feet (traditional salt)

Save travels and Happy Holidays
